**Profitable productivity  
through efficient business processes.**

# PRODUCTION PLANNING

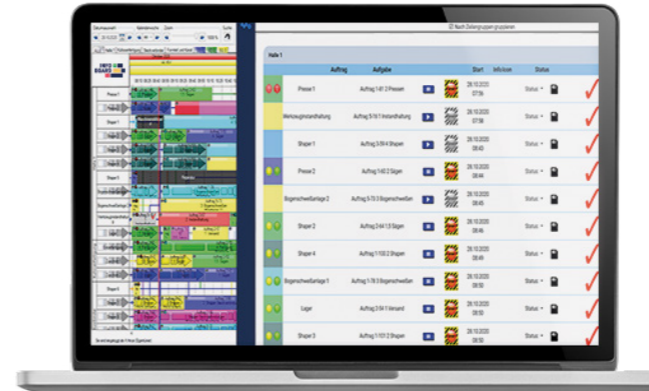

## Simple, Dynamic, and Flexible Manufacturing Planning

infoBoards Manufacturing Execution System, enables effortless resource planning according to production orders in your ERP system, sustainably fostering productivity and value creation. Our automatic optimization of production controls ensures punctual deliveries, while also allowing you to visualize production progress and completed tasks.

## Machine Planning

### Flexible order planning

- Monitor delivery dates
- Reduce lead times
- Display capacity utilization
- Schedule shifts

## Operational Data Recording

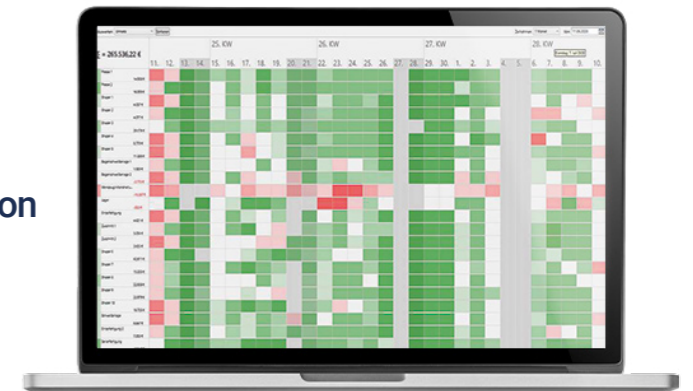

### Knowing what's next

- Manual start/stop of tasks
- View timeouts
- Updates times automatically
- Orders are in the correct order
- Real time notifications on the planning board (start/stop, malfunctions etc.)

## Key Metrics Analysis

### Measuring success

- Target/Actual performance comparison
- Adherence to delivery deadlines
- Lead times
- Utilization heatmap

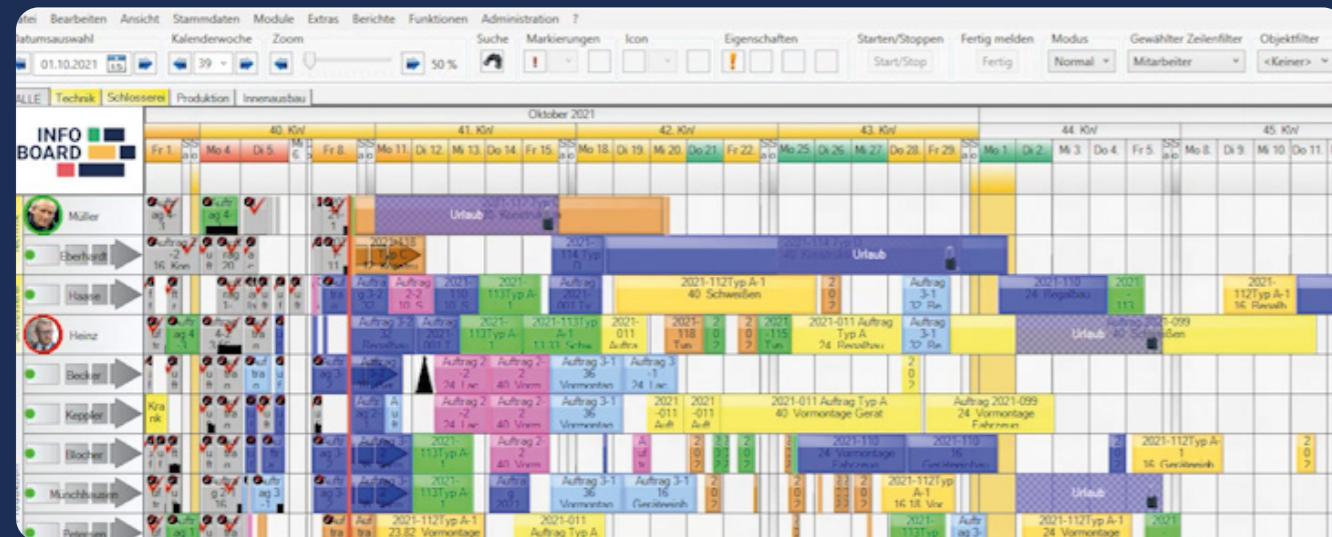

# infoBoard Application Server

...automatically updates the planning board and displays value creation

- Rescheduling of uncommenced operations
- Visualization of additional expenses
- Automatic adjustment for early completion
- Optimization of subsequent tasks
- Optimization of all orders by delivery dates

If an operation hasn't started yet, it will shift to the day line, creating visible gaps on the planning board - unproductive time.

# Interface to your ERP System

- ✓ Transfer of production orders
- ✓ Synchronize changes and the material status
- ✓ Feedback to ERP system: start, end and completion notification

## infoBoard Converter

InfoBoard Converter can convert various data formats for direct use in the planning board. Automated data querying and conversion not only saves hours of preparation time, but also significantly minimizes the risk of errors, enhancing planning accuracy.

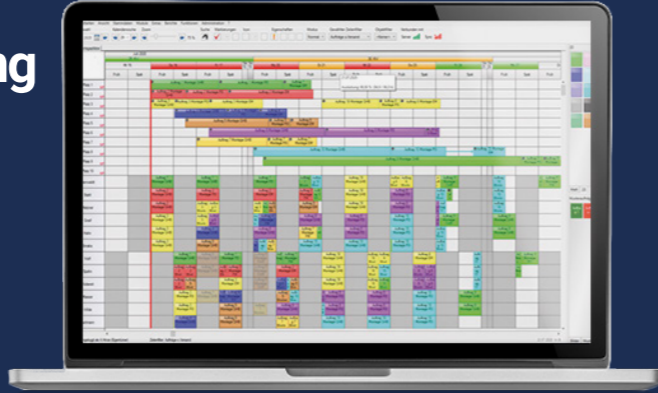

## infoBoard Synctool

The Synctool can transfer multiple operations simultaneously and automatically set the optimal order. It also takes existing orders as well as delivery dates into account. The changes are saved to the planning board, optimizing the utilization of working hours.

## Personnel Deployment Planning

Machines and personnel at a glance

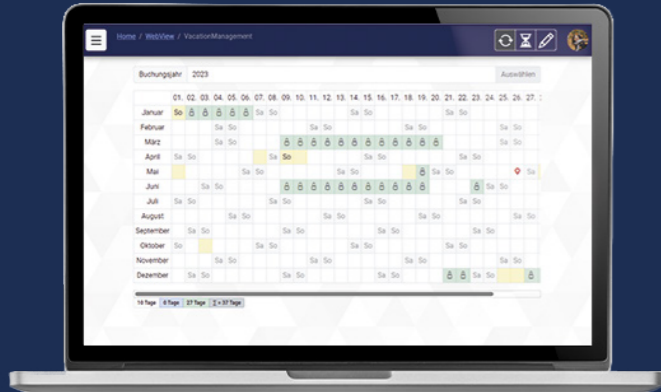

- Overview of personnel availability
- View attendance in real time
- Capacity-oriented order planning
- Plan shifts punctually and according to order specification.

## Vacation Management

Request vacation easily online

- Vacations visible on the planning board
- Plan vacation either by day or by hours
- Detailed vacation overview
- Decentralized vacation requests and central approval

## Personnel Time Recording

Attendance visible in real time

- Attendance time recording
- Attendance time evaluation
- Annual record of working hours
- DATEV - .csv export

We are here for you

# Interface Consultation

We're here to help if you need support, synchronizing your relevant data onto the planning board. Our professional process and interface consultation follow structured phases.

# Training

We offer various training formats to achieve optimal planning. Annually, we provide an average of 700 training hours for our customers. See for yourself and book training now (including e-learning access).
